

# Clays and Clay Minerals: Proceedings of the Eighth National Conference on Clays and Clay Minerals

Clays and Clay Minerals, Volume 8 contains the proceedings of the Eighth National Conference on Clays and Clay Minerals held in Norman, Oklahoma, on October 11-14, 1959 and sponsored by the Clay Minerals Committee of the National Academy of Sciences National Research Council in cooperation with the University of Oklahoma. The papers explore research findings as well as problems related to clays and clay minerals in many diverse disciplines. This volume is comprised of 22 chapters and begins with a description of clays and clay minerals present in Wichita Mountain area, southwestern Oklahoma, followed by an analysis of the correlations of kaolinite crystallinity with chemical and physical properties. An evaluation of the amount and distribution of montmorillonite in some kaolins found in Georgia and South Carolina is then presented. Subsequent chapters focus on the geology, mineralogy, and genesis of selected fireclays from Latah County, Idaho; chemical weathering of layer silicate clays in loess-derived Tama silt loam of southwestern Wisconsin; possible uses of clay minerals in the search for oil; and a geochemical method for determining paleosalinity. The final chapter presents the results of a mineralogical analysis of soil clays involving vermiculite-chlorite-kaolinite differentiation. This book will appeal to geologists, geochemists, and mineralogists.

EVALUATION OF THE AMOUNT AND DISTRIBUTION OF Proceedings of the Ninth National Conference on Clays and Clay Minerals Earth Sciences, Volume 11: Clays and Clay Minerals covers the proceedings of the For up to eight carbon atoms in the alkyl chain adsorption has a limit close to hydration properties of potassium deficient clay micas - Science Direct Proceedings of the Eighth National Conference on Clays and Clay ON CLAYS AND CLAY M I N E R A L S ratio of melt to muscovite, ION ADSORPTION ON CLAYS: A REVIEW - Clays and Clay Clays and clay minerals : proceedings of the seventh National Conference on 8 : proceedings of the eighth National conference on clays and clay minerals Clay Minerals: Volume 7 Issue 1 Water vapor adsorption isotherms at five temperatures between 0 and 40C were obtained on Li and Na kaolinite.
