

## ColdFusion MX Web Application Construction Kit (5th Edition)

If you're looking to create real-world applications that solve real-world problems using ColdFusion MX as your tool, there's no better place to start than with The ColdFusion MX Web Application Construction Kit. Serving as both tutorial and reference, this all-in-one kit provides everything you need to begin creating Internet-based applications--including evaluation and developer versions of ColdFusion MX and its development environment. Building on the tried-and-true formula of the four best-selling previous editions--but using lessons geared toward creating the next generation of Web projects--veteran author Ben Forta moves from the fundamentals of Web and database design to more complex topics like creating data-driven pages, implementing security mechanisms, and building complete applications. In the process, he covers new features in ColdFusion MX: a J2EE-based engine, a new development environment, additional debugging tools, Flash integration, business charting, XML manipulation, and more. Whether you're a recent ColdFusion convert or an old hand who's ready to learn some new tricks and best practices, you'll find answers to all your questions in the definitive and standard developers reference--The ColdFusion MX Web Application Construction Kit.
